

## Safety first

---

Health and safety are more than priorities at Adriatic LNG: They are fundamental values. The Company is totally committed to ensuring a safe working environment, free from accidents, where “Nobody Gets Hurt!”.

To properly assess risks and ensure safety, health and a clean environment, Adriatic LNG has also adopted a management system named SHEMS (Safety, Security, Health and Environmental Management System), designed to effectively manage individual and operational risks in order to protect employees, contractors, suppliers, clients, members of the local community and corporate assets.

The **SHEMS** complies with the highest standards of safety, health and environment excellence at an industrial level and is subject to recurring tests and updates, involving all employees. Furthermore, it is fully compliant with the environmental management system of the Organization for Standardization (ISO 14001:2004) and the Occupational Health and Safety Assessment Series for the health and safety management systems (OHSAS 18001:20).

Every employee and contractor at Adriatic LNG share the responsibility of identifying, assessing and alleviating the potential risks of their working activities. From an operational point of view, a careful analysis of the accidents - and especially those involving “near misses” - allows for the implementation of corrective procedures and consequential actions. Adriatic LNG has adopted a specific **Incident Risk Assessment Tool** to identify the highest potential risks from these events. From this analysis measures are developed to prevent the occurrence.
